

Zephyr Project: Unlocking Innovation with an Open Source RTOS

任 慰(Wayne Ren)

Vision Statement

The Zephyr Project strives to deliver the **best-in-class RTOS** for connected resource-constrained devices, built to be secure and safe.

Zephyr Project

- **Open source** real time operating system
- **Vibrant Community** participation
- Built with **safety and security** in mind
- **Cross-architecture** with broad SoC and development board support.
- **Vendor Neutral** governance
- **Permissively** licensed - Apache 2.0
- **Complete**, fully integrated, highly configurable, **modular** for **flexibility**
- **Product** development ready using LTS includes security updates
- **Certification** ready with Auditable

Architecture

- Highly Configurable, Highly Modular
- Cooperative and Preemptive Threading
- Memory and Resources are typically statically allocated
- Integrated device driver interface
- Memory Protection: Stack overflow protection, Kernel object and device driver permission tracking, Thread isolation
- Bluetooth® Low Energy (BLE 5.1) with both controller and host, BLE Mesh
- 802.15.4 OpenThread
- Native, fully featured and optimized networking stack

Fully featured OS allows developers to focus on the application

System Configurations

**Single Core
MCU**

**Supported
with OpenAMP**

**Supported on
some architectures**

**Supported
with ACRN**

**Supported with
Bluetooth & 15.4**

Code Repositories

Zephyr OS: Long Term Support (LTS - 1.14)

It is:

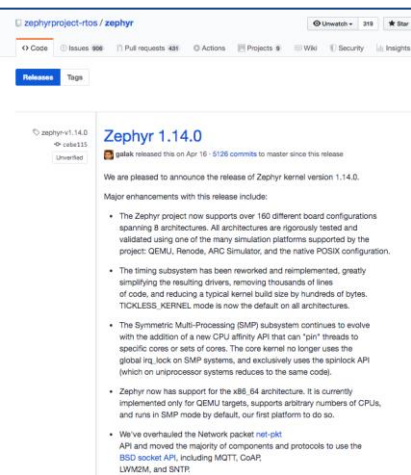

- **Product Focused**
- **Current with latest Security Updates**
- **Compatible with New Hardware:** We will make point releases throughout the development cycle to provide functional support for new hardware.
- **Tested:** Shorten the development window and extend the Beta cycle to allow for more testing and bug fixing
- **Supported** for 2 years

It is not:

- **A Feature-Based Release:** focus on hardening functionality of existing features, versus introducing new ones.
- **Cutting Edge**

Next LTS will be Zephyr 2.7, available in October!

Zephyr OS: Long Term Support (LTS - 1.14)

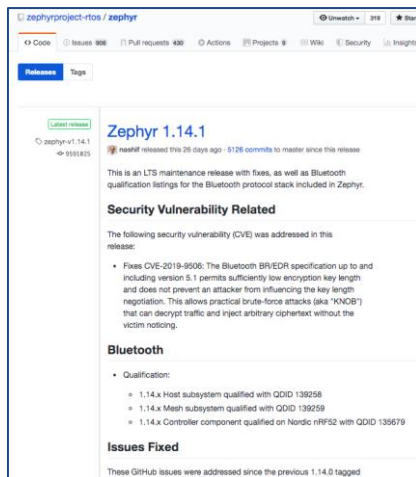

Zephyr 1.14.0

gslak released this on Apr 16 · 5126 commits to master since this release

We are pleased to announce the release of Zephyr kernel version 1.14.0. Major enhancements with this release include:

- The Zephyr project now supports over 160 different board configurations spanning 8 architectures. All architectures are rigorously tested and validated using one of the many simulation platforms supported by the project: QEMU, Renode, ARC Simulator, and the native POSIX configuration.
- The timing subsystem has been reworked and reimplemented, greatly simplifying the resulting drivers, removing thousands of lines of code, and reducing a typical kernel build size by hundreds of bytes. TICKLESS_KERNEL mode is now the default on all architectures.
- The Symmetric Multi-Processing (SMP) subsystem continues to evolve with the addition of a new CPU affinity API that can "pin" threads to specific cores or sets of cores. The core kernel no longer uses the global irq_lock on SMP systems, and exclusively uses the spinlock API (which on uniprocessor systems reduces to the same code).
- Zephyr now has support for the x86_64 architecture. It is currently implemented only for QEMU targets, supports arbitrary numbers of CPUs, and runs in SMP mode by default, our first platform to do so.
- We've overhauled the Network packet `net_pkt` API and moved the majority of components and protocols to use the BSD socket API, including MQTT, CoAP, LWMM, and BTRP.

Zephyr 1.14.1

nealfr released this 26 days ago · 5126 commits to master since this release

This is an LTS maintenance release with fixes, as well as Bluetooth qualification listings for the Bluetooth protocol stack included in Zephyr.

Security Vulnerability Related

The following security vulnerability (CVE) was addressed in this release:

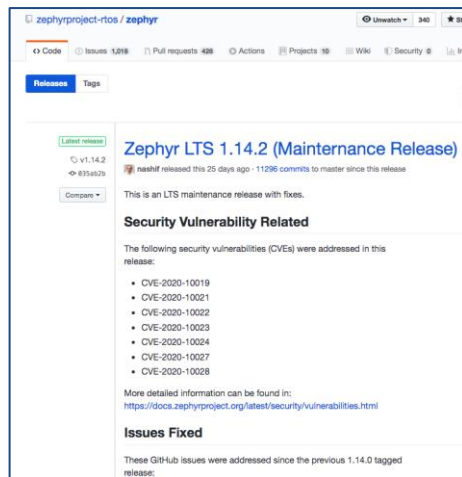

- Fixes CVE-2019-9006: The Bluetooth BR/EDR specification up to and including version 5.1 permits sufficiently low encryption key length and does not prevent an attacker from influencing the key length negotiation. This allows practical brute-force attacks (aka "KNOB") that can decrypt traffic and inject arbitrary ciphertext without the victim noticing.

Bluetooth

- Qualification:
 - 1.14.x Host subsystem qualified with QCID 139258
 - 1.14.x Mesh subsystem qualified with QCID 139259
 - 1.14.x Controller component qualified on Nordic nRF52 with QCID 139679

Issues Fixed

These GitHub issues were addressed since the previous 1.14.0 tagged release:

Zephyr LTS 1.14.2 (Maintenance Release)

nealfr released this 25 days ago · 11296 commits to master since this release

This is an LTS maintenance release with fixes.

Security Vulnerability Related

The following security vulnerabilities (CVEs) were addressed in this release:

- CVE-2020-10019
- CVE-2020-10021
- CVE-2020-10022
- CVE-2020-10023
- CVE-2020-10024
- CVE-2020-10027
- CVE-2020-10028

More detailed information can be found in: <https://docs.zephyrproject.org/latest/security/vulnerabilities.html>

Issues Fixed

These GitHub issues were addressed since the previous 1.14.0 tagged release:

Zephyr 1.14.3

This is an LTS maintenance release with fixes.

Security Vulnerability Related

The following security vulnerabilities (CVEs) were addressed in this release:

- CVE-2020-10066
- CVE-2020-10069
- CVE-2020-13601
- CVE-2020-13602

More detailed information can be found in: <https://docs.zephyrproject.org/latest/security/vulnerabilities.html>

Issues Fixed

These GitHub issues were addressed since the previous 1.14.0 tagged release:

- 18334 - DNS resolution is broken for some addresses in master/2.0-pre
- 19917 - Bluetooth: Controller: Missing LL_ENC_RSP after HCI LTK Negative Reply
- 21107 - LL_ASSERT and 'imprecise data bus error' in LL Controller
- 21257 - tests/net/net_pkt failed on mimxrt1050_evk board.
- 21299 - bluetooth: Controller does not release buffer on central side after peripheral re
- 21601 - 'radio_is_ready()' failed
- 21756 - tests/kernel/obj_tracing failed on mec15xxevb_assy6853 board.
- 22968 - Bluetooth: controller:LEGACY_ASSERTION failure on invalid packet sequence

Delivering bug fixes and latest security updates!

Zephyr OS: Auditable

An auditable code base will be established from a subset of the **Zephyr OS LTS**.

- Code bases will be kept in sync.
- More rigorous processes (necessary for certification) will be applied to the auditable code base.

Processes to achieve selected certification to be:

- Determined by **Safety** Committee and **Security** Committee
- Coordinated with **Technical Steering** Committee

Building in Security for LTS & Auditable

- Established **Security Committee in 2016** – meets bi-weekly.
- Secure Coding Practices have been [documented](#) for project.
- Zephyr Project [registered as a CVE Numbering Authority](#) with MITRE.
- Security Working Group has vulnerability response criteria publicly documented
 - addressed weaknesses and vulnerabilities already
- “Gold” Best Practices for projects as defined by CII
 - <https://bestpractices.coreinfrastructure.org/projects/74>
- Leveraging Automation to **prevent regressions**:
 - Weekly Coverity Scans to detect bad practices in imported code
 - MISRA scans being incorporated, to evolve to conformance and address issues.

Building in Safety for LTS → Auditable

- Established **Safety Committee in 2019**, meets bi-weekly. Community that understands Safety considerations, and implications.
- Initial target was decided by Governing Board to be **IEC 61508** (it is a common basis for others standards that the members care about)
- Build on Coding Practices have been [documented](#) for the project to establish more general **Coding Guidelines**
- Passing Best Practices for **project quality** as defined by CII
 - <https://bestpractices.coreinfrastructure.org/projects/74>
- Leveraging Automation to **prevent regressions**:
 - Weekly Coverity Scans to detect bad practices in imported code
 - MISRA scans being incorporated, to evolve to conformance and address issues.
 - Looking for open source as well as commercial tooling to help here.

Zephyr OS: Initial Certification Focus

- In scope
- Out of scope

Scope will be **extended** to include **additional components** as determined by the safety committee

Some of the modules under consideration for the next iteration include: Crypto, IPC, Flash, etc.

- Documentation
- Tooling
- Code
- Other

Zephyr Ecosystem

Zephyr OS

- The kernel and HAL
- OS Services such as IPC, Logging, file systems, crypto

Zephyr Project

- SDK, west, tools and development environment
- Additional middleware and features
- Device Management and Bootloader

Zephyr Community

- 3rd Party modules and libraries
- Support for Zephyr in 3rd party projects, for example: micro-ROS, Tensorflow LITE, Micropython, Jerryscript

RISC-V support history in Zephyr

1st commit

commit cd83e85edc5d741f6b52c6b5995303c30bda443a
Author: Jean-Paul Etienne <fractalclone@gmail.com>
Date: **Wed Jan 11 00:24:30 2017 +0100**
arch: added support for the riscv32 architecture

SiFive Joins Zephyr

Date: **August 17, 2018**
<https://www.linux.com/news/zephyr-project-embraces-risc-v-new-members-and-expanded-board-support/>

riscv64 support

commit 1f4b5ddd0fa84f828213fe1200917bad480bce7b
Author: Nicolas Pitre <npitre@baylibre.com>
Date: **Wed Jul 17 13:17:05 2019 -0400**
riscv32: rename to riscv

userspace support

commit 542a7fa25d0e135132b212ffe5ec07e98cffba36
Author: Alexandre Mergnat <amergnat@baylibre.com>
Date: **Tue Jul 21 16:00:39 2020 +0200**
arch: riscv: add memory protection support

riscv support status

- RISC-V international: associate member of Zephyr
- 13 boards, 9 SoCs riscv32 & riscv64, user space
- Todo: smp, MMU, more boards, more SoCs

Want riscv maintainers and contributors!!

Add support GigaDevice GD32V

<https://github.com/zephyrproject-rtos/zephyr/pull/34970>
Author: TOKITA Hiroshi <tokita.hiroshi@gmail.com>
Date: **8 May 2021**

This PR adds support for GigaDevice GD32V SoC

riscv smp support

<https://github.com/zephyrproject-rtos/zephyr/pull/29105>
Author: Katsuhiro Suzuki <katsuhiro@katsuster.net>
Date: **11 Oct 2020**

This patch adds support of SMP for RISC-V privilege systems.

latest commit

commit 7b09d031fae3969fbe8647a57190f1fa21fabd8e
Author: Felipe Neves <felipe.neves@espressif.com>
Date: **Mon Jun 14 11:10:47 2021 -0300**
Plus added implementation for **esp32c3 SoC**.

1st Zephyr Developer Summit

700 people registered, **3** tracks, **5** mini-conferences, **28** sessions and **51** speakers

Zephyr RTOS Virtualization and Memory Isolation

- Integrating RISC-V PMP Support in Zephyr
- Securing MCUBoot in 5 minutes or less
- ACRN Hypervisor and Zephyr RTOS for Industrial IoT Applications
- Trusted Firmware M in Zephyr

Zephyr's Ecosystem Support
